

Eye & Face Protection

Further eye and face protection works in tandem with a face mask or respirator to provide an extra barrier.

What are different types of Eye & Face Protection?

Face Shields

Face shields provide full face protection and can be worn over glasses or goggles.

We stock a full-length (8-2/3" x 12-3/5") shield made of optically clear, durable PET with anti-fog and anti-glare treatment. It features an elastic headband with foam strip for pressure relief. This FDA certified shield is also lightweight for comfort while in use.

Goggles

Goggles fit tightly against the face, offering full protection against droplets and splashes.

We stock anti-fog goggles that fit over most prescription glasses. Available perforated or non-perforated, they feature a soft PVC body, adjustable elastic headband, and indirect vents. They provide 99.9% UV protection and meet the ANSI 787.1 standard for eye protection.

Safety Glasses

Safety glasses protect while allowing air in and around the eye area

Our stock safety glasses feature a black frame and clear lenses with 99.9% UV protection. With an adjustable nose pad, four adjustable temple lengths, and ratcheting lens adjustment, you are guaranteed a secure, comfortable fit. These glasses also meet the ANSI 787.1 standard for eye protection.
